

ABSTRACT

The present invention provides pyrazole derivatives represented by the general formula:

wherein R¹ represents H, an optionally substituted C₁₋₆ alkyl, etc.; one of Q and T represents a group selected from the following:

, and the other represents -Z-Ar wherein Z represents -O-, -S-, etc.; Ar represents an optionally substituted C₆₋₁₀ aryl, etc.;

R represents an optionally substituted C₃₋₈ cycloalkyl, an optionally substituted C₆₋₁₀ aryl, etc., pharmaceutically acceptable salts thereof, and prodrugs thereof, which exhibit an excellent inhibitory activity in human sodium/glucose cotransporter (SGLT) and are useful as agents for the prevention, inhibition of progression or treatment of a disease associated with the excess uptake of at least a kind of carbohydrates selected from glucose, fructose and mannose (diabetes, postprandial hyperglycemia, impaired glucose tolerance, diabetic complications, etc.), and pharmaceutical compositions containing the same, medicinal uses thereof and intermediates for production therefor.
